Mr. Bailey's Science Camp

So you're sad you don't get to have science class with Mr. Bailey? You think you aren't going to get a chance do all the fun experiments your older siblings or friends did? Well cheer up buttercup, because Mr. Bailey never left, he just moved down the street to Oak Grove School. Starting in October you can take his one of a kind, wonderful, wacky, and seriously scientific chemistry or physics class.

High-Flying Physics (ages 11-14)

10 Tuesdays, 3:30 - 5:00 | Starts October 12th
\$200 + materials

Tired of being stuck on the ground? Do you wish you could accelerate straight up at speeds of 194.5 feet per second? Well you can't. But a model rocket can! Join this class and learn all about the physics of flight as we build and launch model rockets, make and fly balsa wood planes and boomerangs, and learn many other tricky science moves that relate to force, mass, and acceleration. Of course we won't stop there because Mr. Bailey likes to keep things electric. After we clear the flight deck we will move into the world of motors, magnets, and machines. Dr. Frankenstein never had it so good. Don't be shocked if you end up having a super fun time. As always, this class is strictly you make it, you take it. All the participants will go home with motors and magnets, rockets and boomerangs, divers and submarines. You think I'm kidding? Obviously you haven't been informed Mr. Lebowski.

Chemistry Magic (ages 9 and up)

10 Thursdays, 3:30 - 4:30 | Starts October 14th
\$200 + materials

We start off with 12 exciting, safe chemistry experiments that all have a magical twist to them. After you vault yourself to the top of the neighborhood magicians list, it's time to get serious. The next step is to get out the beakers and the Erlenmeyer flasks and start making polymers, polyurethane foam, and creating some very exothermic reactions (lots of heat). You'll be a junior lab scientist in training by the end of it all; that is, if you don't blow yourself up first. Just kidding mom! All the activities are safe as can be, and have been performed and explained by Mr. Bailey for centuries, really. The coolest part is that you'll be taking home all of your experiments and equipment to continue with your scientific pursuits.
